Tildelingskriterium talværdi: 40

Kriterium:

Type: Kvalitet

Beskrivelse: Exceptions from the main rule in the Supply Regulations: In accordance with the Utilities Regulations § 7-9 second paragraph, the first period shall, as a main rule, be weighted with at least 30 percent in the award criteria. For this procurement, however, it is considered that it gives better climate and environmental effect to set concrete requirements in the requirement specifications, cf. § 7-9 third period second paragraph. Justification for exceptions from the main rule on weighting climate and environmental considerations: KOFA has stated that the contracting authority must substantiate why the exception is applicable in the concrete procurement, in accordance with the requirement for verifiability, cf. the KOFA case 2025/0819 section 30. The justification shall show that the exception gives an objectively better climate and environmental effect and that the contracting authority has a sufficient knowledge basis. It is sufficient that the effect is marginally better. The procurement concerns services for inspecting street foundations and facades. The concrete assessment of the climate and environmental effect is based on experience from previous procurements of the same performance, together with the minimum requirements based on, among other things, Oslo municipality's city council matter 1004/25. Transport of the resources that shall be used under the framework agreement is the most significant causal factor for climate and environmental footprint. In order to reduce the load associated with transport pollution, VAV sets the following minimum requirements for transport for all assignments: • Zero emission vehicles, i.e. 100% battery electrical or hydrogen powered vehicles, or; • biogas vehicles that at least fulfil Euro class 6/VI The contractual requirement applies for the last transport stretch ("cargo mile") of the service. This initiative gives a significant and documentable environmental gain and has greater effect than a general weighting of climate and environmental considerations for transport when awarding. Conclusion: Overall, it is clear that the above mentioned minimum requirements provide better climate and environmental effect, compared with weighting climate and environmental considerations as the award criterion. The above mentioned minimum requirements give a better climate and environmental benefit based on the nature and scope of the procurement. The requirements therefore fulfil the condition for exceptions from the main rule in accordance with the utilities regulations § 7-9 second section.
