Titel: Temporary compound tradesman services

Beschreibung: Oslobygg KF needs to establish a temporary framework agreement for compound trade services. The background for the procurement is an ongoing dispute relating to the ordinary procurement of a framework agreement for compound tradesman services. As a result of the dispute, the implementation of the ordinary procurement is pending. Oslobygg has a continual and significant need for trade services connected to the operation, maintenance and development of the company's property portfolio. It is therefore necessary to ensure sufficient capacity and continuity in the service delivery until the ordinary framework agreement can be established. Based on this, Oslobygg is carrying out a temporary procurement of compound trade services. The framework agreement shall cover Oslobygg's temporary needs and will i.a. include service assignments, ongoing maintenance and major maintenance projects where there may be a need for coordination of several trades. The framework agreement will be valid for 9 months, with an option for Oslobygg to extend the contract for a further 3 months. The total maximum agreement period is therefore 12 months. The temporary framework agreement is intended as a transitional solution up until the situation connected to the ordinary procurement has been clarified and the new ordinary framework agreement can come into force.

Beschreibung: Climate and environmental considerations are not weighted as an award criteria by 30%. It is chosen to have strict minimum requirements for the environment that, according to the contracting authority's assessment, will clearly give a better climate or environmental effect than to set up the environment as an award criterion. Pursuant to the Public Procurement Act § 5b, 2nd paragraph, the last sentence, the Contracting Authority is obliged to state a justification for this in the competition documents. In this procurement there are requirements regarding emission free construction site. All machines that are used in the contract shall be emission free and all work shall be carried out emission free. Separate requirements have been set in the contract for emission free transports. Climate gas emissions related to material use in the contract/requirement specifications require collection of EPD for the largest procurements in the assignments, as well as requirements for the maximum allowed greenhouse gas emissions for some main materials. There are separate requirements for the use of re-use materials in the contract, with a higher mark-up for the use of such goods. Active use of the re-use warehouse Reconstruction, where the Contracting Authority is a partner, as well as other commercial re-use systems and markets. The contract states that waste from the construction site shall be source sorted and a minimum of 90 percent of the waste shall be sorted and delivered to a certified waste disposal site or directly for recycling. Surplus materials shall not be discarded. The contract/requirement specifications

mean that the tenderer shall find measures and ensure good solutions for waste reduction in the assignments in the contract. According to the contracting authority's assessment, the above mentioned requirements will clearly give a better climate and environmental effect than the equivalent award criteria in the procurement. The exclusionary provision in the Public Procurement Act § 5b, 2 paragraphs, 3rd period will therefore apply.
