Τίτλος: 2026/1789 - Framework agreement with one tenderer for the operation and maintenance of lift facilities for properties in Agder.
Περιγραφή: The objective of the framework agreement is to ensure Statsbygg operational stability through preventive work on the agreement´s lifts and lifting platforms, i.e. short possible downtime and fewest possible stoppages. As well as improvements in accordance with deviation reports and replacements. The portfolio consists of different manufacturer and type of lifts. It is presumed that the lift contractor has the necessary competence and access to spare parts to carry out service and repairs in a satisfactory manner. The contract will apply for the lifts stated in the lift overview for the area covered by the framework agreement. Facilities can be added to or taken out of the contract during the contract period. New installations that come into the contract shall have the same terms and will be priced alike with equivalent lift facilities that are already priced in the contract. Lift installations that are in the guarantee period will only come when the guarantee has expired

Κριτήριο:
Είδος: Ποιότητα
Περιγραφή: This procurement uses the exclusion provisions in PPR § 7-9 (4), since the climate and environmental requirements connected to the framework agreement are considered to have a clearly better overall climate and environment effect than the use of the award criteria. The climate and environmental impact of this procurement has primarily been identified as challenges connected with the content of health and environmentally hazardous substances in products used in connection with service, maintenance and repairs of the lift, waste handling thereof, as well as transport. In order to reduce the environmental impact of the content of health and environmentally hazardous substances, products that are used shall not include substances on the Norwegian priority list and the candidate list in REACH. This can be documented by using environmentally labelled products or tools such as Cobuilder Collaborate, or equivalent, to show that the purchased products do not contain such substances. For a selection of products that are primarily used in this type of procurement, as well as cleaning agents, these must be environmentally labelled. The requirements for the products are on a level where it is considered unlikely that a better environmental effect can be documented in a competition, and it will, thus, not very suitable for distinguishing between tenderers in a predictable and verifiable way. There are also requirements for responsible

waste management in order to minimise climate and environmental impact as a result of waste generation. For other procurements of spare parts procured as a result of what the inspections uncover, experience from previous similar framework agreements is that this primarily includes replacing light sources. Energy efficient LED lighting is therefore required. Other standard environmental requirements for products in Statsbygg's procurements are included, in addition to requirements specifically assessed as important for reducing the climate and environmental impact of this procurement. In order to reduce the climate impact associated with driving vehicles in this procurement, zero emission vehicles are required for vehicles with a total weight of up to 3,500 kg. Statsbygg´s assessment is therefore that, for this procurement, the use of climate and environmental requirements as they are designed will have a clearly better climate and environmental effect than the use of the award criteria. The Directorate of Public Construction and Property is therefore exempted from the obligations to emphasise the environment or to prioritise the environment among the three highest prioritised award criteria.
