II.1.4. Short description

The NGC will perform Whole Genome Sequencing (WGS) and subsequent bioinformatics analysis of samples from the regional healthcare system. The WGS data will be stored in a Genome Database (i.e., object storage) and need to be made available for researchers in a secure way. NGC wants to offer a Data Analysis Platform solution to the Regions and Universities for conducting research. The Data Analysis Platform will be the only access point for the WGS data. In addition to the WGS data, the research users of the solution will be able to bring their silo data into the platform. The goal is to allow researchers to query, process, integrate, visualise and perform analysis on voluminous, complex and dynamic data. The users of the solution will be researchers and clinical scientists from the regional healthcare system and the universities.

The goal is to allow researchers to query, process, integrate, visualise and perform analysis on voluminous, complex and dynamic data. The users of the solution will be researchers and clinical scientists from the regional healthcare system and the universities. Roughly estimated, we expect around 80-100 different sites /groups in Denmark, with 20 – 150 users per site/group. We anticipate around a maximum of 500 concurrent users. The users will log into the on-premise NGC HPC system and NGC Private Clouds, wherefrom they will access the platform solution. With the solution, the users can process and analyse NGC's WGS data (read-only) and silo data that the users have uploaded to the NGC HPC system (e.g., via data connectors).
