2.1. Procedure

Title: Framework agreement ADCP

Description: The Norwegian Polar Institute is looking for acoustic Doppler current profiles (hereafter called ADCPs) that shall be implemented on fixed and drifting oceanographical platforms in observation systems in Arctic or Antarctic waters within ongoing and future monitoring and research projects.

Procedure identifier: 9af58133-8e8b-4155-a52c-0736dda27aec

Previous notice: f0313177-6ec2-4e09-87f3-fc24b7568e7d-01

Internal identifier: 2026/12

Type of procedure: Open

The procedure is accelerated: no

Main features of the procedure: The instruments must measure vertical profiles of sea currents (speed and direction). The instruments should be equipped with a temperature and pressure sensor. They should also have the option to include a bottom tracing or ice tracing module. For some purposes ADCP's with a shorter range will have an extra vertical beam for high resolution turbulence measurements and/or possibilities to measure wave height and direction and/or the sea ice depth passage and operation will be of interest.
