Radiation monitors. Alarm Systems. The Chemical, Biological, Radiation and Nuclear (CBRN) Delivery Team (DT) are equipment sponsors for radiation detection and monitoring equipment used within UK Government. The Authority has a requirement to provide a replacement for its gamma radiation monitoring capability, fitted in the Manoeuvring Room on board its nuclear powered submarines, plus 10 years support and maintenance. A gamma radiation detection capability and incorporated alarm is required that will be capable of the detection and display of the levels of gamma radiation present in room, from a fixed position. The equipment will also incorporate multiple preset, and adjustable, audible and visual alarms. The requirement is for 20 units. The equipment is used to aid operator knowledge regarding habitability of the manoeuvring room during a reactor incident and to give confidence in the integrity of shielding during normal operation. The in-service support solution shall be for an initial 10 year contract with options for a further 5 years support. The Authority invites expressions of interest from industry for the supply and support of a Gamma Alarm that will meet the capability. Interested parties will be provided with a detailed Statement of Technical Requirements once Expressions of Interest have been received. Suppliers wishing to bid for the supply of this equipment will be asked to provide sample/prototype equipment, at no cost to the crown, for testing against MoD requirements as part of the ITT process. It is anticipated that the technology for this capability is readily available but the packaging of the final solution may require development. Bidders will be expected to detail development costs and timescales as part of the ITT.
