II.2.4. Description of the procurement

The specific objective is to support the operation of public health reference laboratory networks by providing capacity-building activities including training, quality assurance, country visits and other tasks described in more details below, as well as validated AMR detection tools to national reference laboratories in compliance with the new EU AMR case definitions. The overall expected outcome is to further strengthen the coverage, timeliness and usability of AMR surveillance systems for AMR transmission control at local, regional and national levels, inter alia by taking advantage of applied whole-genome sequencing technology, as well extend capabilities for sharing AMR event-related alert information across the EU. This action will improve effectiveness for early warning and targeted control of AMR at the point of transmission and enhance preparedness. Results from this action will further inform the evaluation of AMR containment activities and policies across the EU to contribute to the long-term strategic development in this area.
