2. Procedure

2.1. Procedure

Title: M/R-station Kongens Tisted

Description: The Contracting Authority wants to purchase an M/R station (Measuring & Regulating Station). The station is to be used for pressure reduction of natural gas between the transmission pipeline and the distribution pipeline. The M/R station will reduce pressure from 80 (transmission) to 55 bar (Distribution), supplying the northern part of Jutland. This is necessary to cover an increasing demand for supply of natural gas during the winter. Furthermore, the transmission line with reduced pressure will also function to balance all the northern distribution grids by providing an additional line pack and thereby using the increasing biogas potential in the region throughout the year. The M/R station will have a flow capacity in the range 0-100,000 Nm³/h range. The M/R station is part of the larger FTB (Fast track Biogas) project. The aim of the FTB project is to establish compressor stations between the distribution and transmission grid. This will enable flow of natural gas and biogas in both directions, making it possible to distribute gas nationally through Denmark, utilizing the biogas produced locally. The compressor station exist of compressor, deodorization and measuring units. For further details regarding the purchase, reference is made to the tender documents. The value of the contract is expected to amount to 3,000,000 EURO. Offers can be submitted for one agreement.
