"Hazardous in an urban fjord" is a programme that shall monitor the leaking of chemicals that are used in a densely populated area and look at how this affects a fjord system.

The monitoring aims to:

- Estimate bio accumulation of selected hazardous substances in several trophic levels in marine food chains;
- Connect exposure of hazardous substances to toxic effects in a marine ecosystem, including hormone disturbing effects and cocktail effects;
- Identify sources and outlets for hazardous substances in fjord systems (where do the hazardous substances go in a fjord) and design target orientated measures.
