#### 5.1.10. Award criteria

##### Criterion:

Type: Price

Name: Lowest price

Description: Lowest price

Category of award weight criterion: Weight (percentage, exact)

Award criterion number: 100

**Criterion:**

Type: Quality

Name: Justification for the use of climate and environmental requirements in the requirement specifications.

Description: According to PPR § 7-9 (4), the award criterion in accordance with PPR § 7-9 (2) and (3) can be replaced with climate and environmental requirements if it is clear that this provides a better climate and environmental effect. The project has prepared a climate gas budget for the construction plan with proposals for initiatives. We have designed climate and environmental requirements where we believe the effect is greatest, given the physical framework conditions the project has. The climate and environmental impact, which is possible to influence and which gives the best value, in this the procurement is mainly related to: 1. Materials and mass production. 2. Emissions from site machines and vehicles. Conclusion: By setting a number of climate and environmental requirements in the contract, we are ensured a good climate and environmental effect and we therefore consider the climate and environmental gains in this procurement to be better safeguarded through such a requirement position over the use of climate and environment as the award criterium. The requirements will stimulate suppliers to think about climate and the environment and show them that this can also be financially sensible for both them and society. Supplementary justifications are to be enclosed with other documents in the procurement.
