2.1. Procedure

Title: Ethanol as a carbon source in a biological treatment facility

Description: Tenderers shall deliver ethanol that fulfils the following requirements: The carbon source must be able to be used as a business for bacteriological water purification (MBBR), i. e. it cannot contain poisons for biology; c.f. any denaturing agents. The minimum allowed concentration target of the delivered ethanol is 95%. The carbon source must be clear, colourless fluid, free of particles and impurities. Tenderers shall document the quality with a safety data sheet (SDS) and an analysis certificate for each delivery. The expected consumption in the first year will be significantly lower with more occasional needs due to the start-up phase of the biological treatment facility with the accompanying start-up curve. The first delivery in accordance with further agreement ila. July/August.

Type of procedure: Open

The procedure is accelerated: no

Main features of the procedure: Function requirement simplified: Carbon source is added to a biological treatment facility for municipal sewage water because carbohydrates are broken down faster than nitrogen compounds do, so that the bacteria therefore lack nutrition to complete the conversion of the nitrogen compounds. The general requirement for a carbon source is therefore that it must be readily available for bacteriological turnover and not lead to poisoning of the bacteria. Requirements of the carbon source in this tender are the requirements that will be used in biological treatment for municipal sewage water (MBBR) with the requirements set for the carbon source.
