Organisation providing more information on the review procedures: The High Court of Ireland

Organisation signing the contract: Trinity College Dublin the University of Dublin_336

6. Results

Value of all contracts awarded in this notice: 400 000,00 EUR

Direct award

:

Justification for direct award: The contract can be provided only by a particular economic operator because of an absence of competition for technical reasons

Other justification: The original contract awarded ref: OJEU: 2017/S 090-176435 resulted in a customised implementation with multiple bespoke information technology integrations. The software has interfaces to other internal and external systems including: Customised integrations with Oracle Financial System. This is a complex interface with more than 15 touchpoints between the two systems, which has taken a number of years to achieve optimal integration. Bespoke functionality to support financial accounting in Planon and Oracle financials. Customised integration with Trinity timetabling system (CMIS) Customised integration with Trinity Events Management System (KX) Customised integration with Trinity Chemical Safety Management System (Labcup) Customised integration with Trinity Web Assets Portal. This delivers effective Asset Management and reports feeding into broader university strategy with regard to insurance and sustainability. Single source of truth in relation to space data across the university. Microsoft Active Directory authentication. A formal technical development partnership agreement is integrated in the existing contract between Trinity College Dublin and Planon Software. Based on the extensive technical integrations and functionality outlined above, and the bespoke development and implementation arising from OJEU ref: 2017/2 090-176435, the contracting authority proposes that any alternative or substitute presents sufficient technical challenges to constitute a disproportionate risk to the operation of the university. Specifically the implementation of an alternative that addresses the complexity and number of integrations reliant on the spatial data, presents a technical resourcing challenge that would require partial or complete disintegration of the IWMS. The IWMS operates as a coherent, real-time solution for the attributes specified above in relation to workplace management.
