2.1. Procedure

Title: 32Chn EEG Hyperscanning Bundle system

Description: A 32Chn EEG Hyperscanning Bundle system will be used to measure electrical voltages through the scalp, offering insights into brain activity during thinking, socializing, and making decisions. We will use the system for deciphering group dynamics during collaborative and passive tasks as a means for understanding neural, cognitive, and social processes in group decision-making and bonding. We will use this system for understanding dissonance in social settings and characterizing individuals in real-world environments through mobile EEG investigations.
