### 2.1. Procedure

Title: Network inspection automation

Description: RTE is the French transmission system operator. As a public utility company, its mission is to operate, maintain and develop the network of high and ultra-high voltage lines. RTE must guarantee the proper operation and safety of the electricity network, while ensuring free and fair access to all users of this network. It transports electricity between power suppliers (French and European) and consumers, whether they are electricity distributors or manufacturers directly connected to the transmission network. As part of the R&D Asset Management Programme, the Network Inspection Automation roadmap is working on improving the efficiency of network inspection with the use of automated data acquisition and analysis. To achieve its objectives, RTE defined 2 work package : Work package1 - data acquisition with helicopters & Work package 2 - automated detection of equipment and anomalies.
