2. Procedure

2.1. Procedure

Title: Consultancy services for the design of an integration system.

Description: The most important points DFØ would like to achieve in the long term are: - Connected services and the best possible customer experience. - Establish a standardised integration layer that ensures seamless information flow between the customers' trade systems and DFØ's accounting system. - Establish a robust and scaleable architecture that simplifies future management and maintenance of the integration systems. The objective of the integration layer is to ensure a standardised, secure and scaleable information flow. We will now start a dedicated design phase to lay the architectonic and technical frameworks before the actual development and implementation starts. To contribute to this work, we seek experienced consultants with expertise within integration architecture. The assignments are organised and prioritised continuously within the development period. The work coordinates with DFØ's development environment and follows established work processes (including sprint based methodology).
