5.1.15. Techniques

Framework agreement:

Framework agreement, partly without reopening and partly with reopening of competition

Maximum number of participants: 6

Justification for the duration of the framework agreement: FWC will have the following

duration: Supplies (purchase and leasing of the prefabricated modular units): 12 months initial duration, renewable up to 48 months total duration (12 months, 3 times). Associated services:

12 months initial duration, renewable up to 60 months total duration (12 months, 4 times).

Justification for longer duration for associated services: longer duration is justified by lifecycle of modular units and operational needs that may arise during this lifecycle. Therefore, the framework contract in this regard may continue for one additional year beyond the standard FWC duration of 4 years to ensure accommodation of the services related to the Units

/containers in the possession of the EUAA, e.g. their potential modifications, disposal,

relocation etc. As the timing and frequency of these requirements cannot be predicted with

certainty, especially in view of the overall owned Units/containers, extending the availability of associated services for an additional year provides the EUAA with the necessary flexibility to respond to operational needs without interruption. It also ensures that such services continue

to be performed by the contractor with the requisite technical knowledge of the Units, thereby safeguarding their integrity and functionality. Preventive and corrective maintenance services:

12 months initial duration, renewable up to 120 months (12 months, 9 times). Justification for

longer duration for corrective and preventive maintenance: the nature of maintenance services justifies the duration, exceeding 4 years. The purchased Units are expected to remain

operational well beyond the initial four-year framework contract duration, e.g. the Units may

have potentially 10 years of envisaged lifecycle. Therefore, preventive and corrective

maintenance services for purchased Units may continue for up to six additional years. Given

the build-to-order nature of the Units, the contractor supplying the Units is considered as best placed to provide maintenance services and technical support throughout their lifecycle.

Namely, the said contractor possesses the necessary technical knowledge, design know-how, specialised tools, and trained personnel required to maintain the Units in accordance with the manufacturer's (i.e. contractor's) standards. It enables timely access to spare parts and technical expertise, thereby preserving the reliability, safety, and performance of the Units.

This approach represents better value for money by maximising the useful life of the assets in the possession of the EUAA and avoiding the need for separate procurement procedures or the engagement of third parties who may lack the necessary technical expertise. The absence

of preventive and corrective maintenance services for the installed Units would create a

significant risk of equipment failure. This could adversely affect the reliability and availability of the Units, resulting not only in reputational damage to the EUAA but also in potential health

and safety risks for both EUAA's staff and users of the Units. Ensuring that prolonged

maintenance services are in place is therefore essential to maintain the Units in a safe, reliable, and fully operational condition throughout their service life.
