5.1. Lot: LOT-0002

Title: Solar Simulator

Description: This call for bids concerns the supply of a solar simulator that produces the solar spectrum for applications in photoelectrochemistry, photocatalysis, and photovoltaic research. The system must be capable of both standalone operation and integration with a scanning probe microscope via a fiber optic coupling. The solar simulator must enable controlled photo-irradiation of samples from multiple directions (with respect to the samples), including top, lateral, and bottom illumination. This capability is required to support a wide range of experimental configurations.
