2.1. Procedure

Title: 9719 IM GSM-R Call Monitoring Solution

Description: Iarnród Éireann (IE) currently operates and maintains a national GSM-R mobile network which provides driver to CTC communications via on-board GSM-R cab-mobile equipment provided by Siemens Mobility. Currently, GSM-R is in operation on the DART network, with national rollout expected to occur in 2026 on the rest of IE's fleets. As part of the overall maintenance of the GSM-R mobile network, IE carry out monitoring and drive-testing which at present requires IE Telecoms personnel to perform this task. The task requires staff to travel onboard IE Trainsets with monitoring equipment, which can be both onerous and time consuming. IE require the provision of an automated drive-testing and RF monitoring solution that will negate the requirement for staff to travel. To achieve this requirement, it is therefore required to provide a GSM-R Modem and hardware (option)/software/firmware capable of interfacing with the modem and providing the end-user (IE) with a HTTP REST API. This can be integrated with the existing IE hosted servers which run a combination of NodeJS applications, InfluxDB and Grafana for recording and visualization of the obtained data or hosted on a supplier provided cloud-based solution that is accessible by IE. Further specific details will be provided to the companies who are pre-qualified to the ITT stage. (This tender was previously issued under Resource ID 7911685, which was cancelled).
