Legal type of the buyer: Body governed by public law, controlled by a local authority

Activity of the contracting authority: Housing and community amenities

2. Procedure

2.1. Procedure

Title: Framework agreement for the purchase of trade services.

Description: The aim of the procurement is to enter into parallel framework agreements for trade services where, as a rule, there is a need for work with several tradesman groups in the same assignment. This includes both commissioning of residences in connection with resident changes, as well as assignments with several tradesmen in inhabited housing. There will, therefore, be works in both inhabited and empty flats under the framework agreements. The assignments will also include work in common areas, both internally and externally. The framework agreements shall be used by the entire Municipal Undertaking for Social Housing. The procurement is divided into two sub-contracts: · Sub-contract 1: Maintenance and renovation assignments, mainly in individual flats. · Sub-contract 2: Major maintenance and renovation assignments. The contracting authority intends to enter into a contract with 8-12 tenderers per sub-contract, provided that there are a sufficient number of suitable tender offers. The distribution of assignments between the framework agreement parties will occur in accordance with the distribution mechanism described in the contract, see point 2.2. The framework agreement period is 2 years. The contracting authority shall have the option to extend the framework agreement for a further 1+1 years, a total of 4 years. Sub-contract 1 has an estimated total value of NOK 2,100 million and sub-contract NOK 2 has an estimated total value of NOK 900 million. The contracting authority emphasises that the figures are estimates and that the actual volume can vary from year to year. The estimated value is not binding for the contracting authority. Call-offs will take place as and when the contracting authority's needs materialise. Tenderers must be aware that changes in the economic and/or political framework terms can lead to the estimated number of assignments being increased/reduced.

5.1.9. Selection criteria

Sources of selection criteria: Notice

Criterion: Relevant educational and professional qualifications

Description of selection criterion: Tenderers must have sufficient competence to fulfil the contract. Documentation requirements: A description of the technical personnel or technical units, particularly those who are responsible for quality control, that the tenderer has at its disposal for fulfilment of the contract. A description of relevant education and professional qualifications. The attached Capacity and competence matrix shall be completed.

Criterion: Environmental management measures

Description of selection criterion: Tenderers are required to have implemented environmental management measures that ensure that the tenderer is suitable to fulfil the contract's environmental provisions. This means that the tenderer has methods for working actively and systematically to reduce negative environmental impact from activities connected to the execution of this contract. Documentation requirements: A description of the tenderer's environmental management measures. If a tenderer has certificates from independent bodies that document the environmental management system, they can be presented as documentation. Refer to the EU Scheme for Environmental Management and Environmental Audit (EMAS), other recognised environmental management systems in regulation (EF) no. 1221/2009 article 45, or equivalent, and other environmental management standards based on relevant European or international standards from accredited bodies such as ISO 14001 or equivalent.

Criterion: Enrolment in a trade register

Description of selection criterion: The tenderer shall be a legally established company. Documentation requirements: Norwegian companies: Company Registration Certificate. Foreign companies: Proof that the company is registered in a trade or business register as prescribed by the law of the country where the company is established.

Criterion: Other economic or financial requirements

Description of selection criterion: Tenderers must have sufficient economic and financial capacity to be able to fulfil the contract. Documentation requirements: The contracting authority will obtain a credit rating. The contracting authority reserves the right to request other financial information if needed. If the Tenderer has valid reasons (e.g. newly started companies) for not submitting the documentation that the Contracting Authority has required, he can document its economic and financial capacity with any other document that the Contracting Authority deems suitable, cf. FOA 16-4 second paragraph.

Criterion: Measures for ensuring quality

Description of selection criterion: Tenderers shall have a relevant quality assurance system for the content of the contract. Documentation requirements: A description of the tenderer's quality assurance methods. Alternatively: Certificate for the company's quality assurance system issued by independent bodies that confirms the tenderer fulfils certain quality assurance standards, for example ISO 9001:2015.

Criterion: Supply chain management

Description of selection criterion: Tenderers shall be suitable for fulfilment of contractual requirements for due diligence assessments for responsible businesses at the latest from 6 months after the contract has been signed, cf. the framework agreement point 13. This means that the Tenderer has implemented measures and systems that are used in the Tenderer's work to safeguard basic human rights and decent working conditions, as well as prevent environmental degradation and corruption. Documentation requirements: A description of the

tenderer's systems for working with due diligence assessments in accordance with the UN's guiding principles for business and human rights (UNGP) and OECD's guidelines for multinational companies. The documentation shall include: * Formal policies/policies that cover an obligation to comply with the requirements of responsible businesses. * Formal policy /guidelines for accountability for sub-suppliers/the supplier chain, (Supplier Code of Conduct). * Descriptions of the tenderer's processes and routines for how the company works with due diligence assessments. * Description of how the tenderer will obtain and maintain an overview of the country of origin and production locations for the products the tenderer offers. The attached reply form must be used to document fulfilment of the requirement. The reply form contains guidance that the tenderer is expected to use in order to minimise the risk of deviations from the tender requirements. Tenderers can submit other documentation for the requirements, but the contracting authority strongly encourages to use the form to document fulfilment of the qualification requirements. If a tenderer would like to use other companies to document fulfilment of the qualification requirement, a completed and signed commitment statement must be enclosed with the tender. A template for a binding statement is attached. Documents can be enclosed in English, Swedish and Danish in order to document fulfilment of the qualification requirements for due diligence assessments for responsible businesses.

Criterion: References on specified deliveries

Description of selection criterion: Tenderers shall have relevant experience from similar assignments. The assignments must show experience with the following points in order to be seen as relevant: · Wet rooms · Floor laying · General renovation of flats, work on older buildings By similar means assignments of the same nature, complexity, degree of difficulty and scope. Documentation requirements: Overview of the tenderer's three most important, relevant deliveries during the last five years, including information on: · Principal · The value of the contract work · Role in reference project · Date of execution · Contact person (name and telephone number) The attached reference form can be used. The contracting authority reserves the right to contact the references.

Criterion: Average yearly manpower

Description of selection criterion: Tenderers must have sufficient capacity to fulfil the contract. Documentation requirements: A description of the tenderer's average workforce in the last three years. The attached Capacity and competence matrix shall be completed.

Description: The contract comprises trade services within several disciplines. The contracting authority assesses that the climate and environmental impact is mainly related to transport and material use, and that the total load in the contract's extent is limited. The market is considered at the same time as being mature to fulfil the requirement for emission free vehicles. In order to ensure real climate effect, there are therefore concrete and binding contractual requirements that the tenderer shall use emission-free vehicles throughout the entire contract period. At the same time, the requirements give the market a clear signal that Oslo municipality is continuing strict climate and environmental requirements, which strengthens the predictability of suppliers and facilitates long-term investments in environmentally friendly technology. Tenderers shall report relevant data so that the climate effect can be followed up and verified. There are also minimum requirements for emissions related to several material groups that are relevant in the contract, cf. the price form that is attached to the tender documentation. This applies to the material groups: · Building sheets · Flooring · Insulation · Structural materials · Roofing · External pipelines This is considered to have a significant climate and environmental effect in the procurement. Furthermore, the products used are required to be of high quality, which is expected to give a longer lifetime and a reduced impact on the environment over time. The contract also includes a ban on the use of tropical timber, a requirement to minimise the use of plastic and requirements for proper waste handling. These conditions are considered well taken care of by referring from the requirement specifications to the relevant contract terms. It is assessed as clear that concrete environmental requirements in the requirement specifications provide a better climate and environmental effect than using climate and environment as the award criteria, cf. the Public Procurement Regulations § 7-9 fourth paragraph. Such a solution is considered more apt and proportionate, as the requirements for emission-free machines and zero emission vehicles as well as emission requirements related to materials to a much greater degree than an award criterion will ensure a real, measurable and verifiable reduction in greenhouse gas emissions from transport and execution of work in the contract period. Furthermore, it is considered that the use of an award criteria would not have given sufficient added value, as the market largely fulfils the relevant environmental requirements. This could therefore result in a situation where the award criterion differs little between tenderers, at the same time increasing the complexity of the evaluation without giving a better climate effect. Overall, it is therefore considered most appropriate to safeguard environmental considerations through absolute requirements, rather than emphasising the environment as an award criterion. This ensures both high climate effect, clear expectations for suppliers and good compliance during the entire contract period.

Description: The contract is for work in and renovation of the existing buildings. The contracting authority assesses that the climate and environmental impact will mainly be for the operation of the building and construction site, transport and material use. It is therefore a requirement that all work at the building and construction site shall be carried out in an emission-free manner. The contract does not involve ground work or the erection of a new building, and heavy building and construction machinery or extensive mass transport is therefore expected to be used to a limited degree. Biogas as a fuel is required to be used for transporting to and from the construction site, or when loading and unloading matter for the mass transport. By setting clear and binding environmental requirements in the contract, the tenderer is ensured to use emission free or biogas based vehicles throughout the contract period (at the latest by 1.1.2027 for vehicles with a permitted total weight of 3.5 tons). The requirements give the market a clear signal that Oslo municipality has strict climate and environmental requirements, which strengthens the predictability of suppliers and facilitates long-term investments in emission-free technology. Tenderers shall also report relevant data so that the climate effect can be followed up and verified in a verifiable way. There are also minimum requirements for emissions related to several material groups that are relevant in the contract, cf. the price form that is attached to the tender documentation. This applies to the material groups: · Building sheets · Flooring · Insulation · Structural materials · Roofing · External pipelines This is considered to have a significant climate and environmental effect in the procurement. Materials and products used shall be of high quality, which is expected to have a longer lifetime and a reduced impact on the environment over time. The contract includes a ban on the use of tropical timber, requirements to minimise plastic use and requirements for proper waste handling. These conditions are already considered well taken care of by referrals in the requirement specifications for relevant contract terms. The contracting authority considers it clear that the concrete climate and environmental requirements in the framework agreement with annexes provide a better climate and environmental effect rather than using the environment as the award criteria, cf. the Public Procurement Regulations § 7-9 fourth paragraph. Such a regulation is considered clearly more effective, as the requirements on emission-free machines and zero emission vehicles as well as emission requirements associated with materials to a significantly greater degree than an award criterion will ensure a real, measurable and verifiable reduction in greenhouse gas emissions from transport and execution of work in the contract period. In conclusion the environment is set up as a possible award criterion in the mini competitions under the framework agreement, so that an assessment on climate and environmental considerations

will be made during call-offs. Overall, environmental considerations are best taken care of through clear, binding requirements, and that this provides the biggest climate effects while maintaining good competition and predictability in the market.
