Name: Environment

Description: The environmental and climate requirements are used as the minimum requirements in the requirement specifications in the stage of the evaluation. The main section connected to a wheeled excavator is connected to the sludg in use and out of production. It is not appropriate to ask for a zero-drag machine as Sogndal municipality does not have the infrastructure to bit this. The municipality does not have a large fleet of machines and does not have the right to take a high demand for charging in a situation where it is dependent on the machine. The contracting authority has set a minimum requirement on the latest engine technology and that the machine shall be at CE marked. The slug for production has been taken high in order to require a long service agreement, and to allow delivery of used machines. When seen in samanheng with the municipality's need, it is clear that the minimum requirements give consideration to climate and environmental effect, cf. the Public Procurement Regulations § 7-9 (4) than to evaluate. The contracting authority would also like a longer guarantee period and evaluate this positively with 10% weighting.
