Pealkiri: Test for amino acids in plasma and urine

Kirjeldus: The HUS Group requests tenders to procure test kit(s) for plasma and urine amino acids by liquid chromatography tandem mass spectrometry (LC-MS/MS) based technology. The test kit(s) should contain all needed assay dependent products like reagents, calibrators, the manufacturer's control samples, the method parameters for the LC-MS/MS instrumentation, product support and all other products needed for the assay except ordinary laboratory necessity, e.g. laboratory water, pipettes or glassware. The products are described in more detail in below in the invitation to tender. This is a total procurement, i.e. the procurement is not divided into lots. The offered solution must cover both plasma and urine testing. At present, the instrumentation available at HUS comprises LC from Shimadzu (Nexera 30 or 40) and MS/MS instruments from AB Sciex (5500+ Triple Quadrupole or Citrine) with Analyst MD 1.6.3. Hotfix 4 or SCIEX OS software versions. In addition, basic laboratory instrumentation like mixers, incubators, pipetting robots and centrifuges are available. The kits are intended for the detection and quantitative analysis of amino acids in plasma and urine. The amino acid profile allows diagnosis and monitoring of inborn errors of metabolism. At present, HUS runs approximately 1000 plasma and 200 urine patient sample tests yearly. The runs are performed in approximately 2-3 batches a week and about 5-10 samples in one batch. Samples should be able to prepare in vials. The contract period is 48 months. ESTIMATED VALUE At present, HUS runs approximately 1000 plasma and 200 urine patient sample tests yearly. This is an estimate and the contracting entity does not commit to the stated consumption figures indicated in the invitation to tender. The final order quantities may be higher or lower than stated. The subject matter and requirements of the procurement are described in detail in the invitation to tender and its annexes.
