Kirjeldus: This procurement is for a framework agreement for the delivery, installation, service and repairs of locks, fittings and door automation in Stavanger and the surrounding area. The most important climate footprint and environmental impacts in this procurement are: Climate gas emissions in connection with transport to and from properties and the environmental impact connected to the procurement of materials and products. Concrete environmental requirements are set to reduce the procurement's total climate footprint and environmental impact. It has been estimated that these requirements will give a better climate and environmental effect than the use of climate and environment as the award criterion. In order to reduce the climate impact from materials and products, the most common of these are purchased as a part of a framework agreement for work with locks, door and gate environments. There are requirements for third party verified environmental labelling for these. In order to reduce climate footprint from transport in connection with the work in properties, emission free vehicles are required. The requirements are set at a level where it is considered that there is little probability that

paragraph of the third period are being assessed as fulfilled. Statsbygg is therefore exempted from the obligation to weight climate and the environment with a minimum of 30 percent or prioritise this among the three highest weighted award criteria.
