Description: The Contracting Authority uses the exclusionary regulation for climate and environmental weighting. The procurement concerns consultancy and engineering design services where the climate and environment effect is mainly connected to the concrete systems that are developed in later call-offs. As future projects are not sufficiently defined by the establishment of the framework agreement, an objective and verifiable evaluation of the expected climate and environmental effect between the tenders is not considered. Climate and environmental considerations are therefore taken care of through binding contract requirements that apply to all tenderers and all call-offs under the framework agreement.

Description: The Contracting Authority uses the exclusionary regulation for climate and environmental weighting. The procurement concerns consultancy and engineering design services where the climate and environment effect is mainly connected to the concrete systems that are developed in later call-offs. As future projects are not sufficiently defined by the establishment of the framework agreement, an objective and verifiable evaluation of the expected climate and environmental effect between the tenders is not considered. Climate and environmental considerations are therefore taken care of through binding contract requirements that apply to all tenderers and all call-offs under the framework agreement.
