2.1.4. Eolas ginearálta

Eolas breise: Procedure to be applied: The procurement will be conducted in accordance with ECMWF's procedures as set out in Invitation to Tender documents, which are available on ECMWF's eProcurement Portal (<https://procurement.ecmwf.int/>) and no other procedures will apply. In submitting this notice ECMWF does not waive the privileges and immunities granted to it by virtue of its status as an intergovernmental organisation or submit itself to any jurisdiction. Tenders must be submitted using ECMWF's eProcurement Portal. Hard copy (paper) submissions will not be accepted. Due to the need to include performance and compliance obligations in the contract, ECMWF will contract only with a single legal person or entity which is competent to undertake and commit to these obligations. ECMWF recognises that some bids will involve a number of organisations which may wish to work together to deliver the contract requirements. In such cases, these organisations must identify a lead contractor who will sign the contract with ECMWF and who will be responsible for putting in place legal arrangements to ensure that it can guarantee that all other organisations will also meet the contract obligations. ECMWF will not enter into multiple contracts with individual members of consortia or groups of service providers. Eligibility: Refer to Section 3.2 of Volume I of the ITT documents.

Teideal: CAMS2_53c Development and provision of observation-based hot-spot emissions of CH₄, NO₂, and CO₂ from existing satellites and the first CO₂M mission

Cur síos: ECMWF, as the Entrusted Entity for the Copernicus Atmosphere Monitoring Service (CAMS), invites tenders for provision of Development and provision of observation-based hot-spot emissions of CH₄, NO₂, and CO₂ from existing satellites and the first CO₂M mission.

These services are for extending the monitoring of large point sources and hotspot emissions in CAMS to also include nitrogen oxides (NO_x) and carbon dioxide (CO₂) and prepare for the uptake of CO₂M observations for CH₄. The aim of such a service is to evaluate and complement emission point source databases and provide monitoring of the emissions over time. To progress towards operational maturity in anticipation of the CO₂M satellite mission, planned to be launched by the end of 2027, this ITT therefore focuses on the following main topics: • Implement a (pre-)operational service to detect and estimate NO_x emission from local sources based on current operational satellites. • Further develop and evaluate the methodology to estimate NO_x emissions from NO₂ satellite observations. • Further develop and evaluate the use of NO₂ emissions estimates to constrain the estimation of CO₂ emission sources. • Further develop and evaluate the methodology to estimate CO₂ emissions from local sources with existing satellite data in preparation for the CO₂M satellite. • Further develop and evaluate the methodology to estimate CH₄ emissions from local sources with existing satellite data in preparation for the CO₂M satellite.
