Cur síos: In this competition the contracting authority has chosen to set minimum requirements for climate and environment, rather than set up the award criteria. The procurement concerns the purchase and delivery of chemicals for swimming facilities, as well as service, maintenance and advice for bathing installations. The types of chemicals that shall be procured are mainly determined by the bathing facilities' technical design, the existing equipment and the need for reliable and efficient water treatment. It is, therefore, not

appropriate to set up the award criteria for the use of different chemicals. The procurement's most significant impact on climate and environment is related to transport and delivery logistics, risk for waste and emissions, packaging handling and efficient operation and maintenance of the bathing technical installations. The contracting authority has assessed that these conditions are most efficiently taken care of through requirements in the requirement specifications and contract, than through an award criteria that is weighted with 30 percent. Transport shall be carried out by zero emission vehicles or biogas vehicles that fulfil minimum Euro class 6/VI for the procurement of all types of services and goods under the framework agreement, proper delivery and unloading, product documentation and systematic environmental monitoring. The requirements apply throughout the contract period and are followed-up through documentation, reports, contract meetings and contract sanctions. When the chemical types are technically predetermined and the execution is subject to environmental requirements, a separate environmental criterium is assessed as less appropriate. The contracting authority therefore considers that the requirements collectively give a better climate and environmental effect than the use of climate and environment as the award criteria, cf. the Public Procurement Act § 5 b second paragraph.
