Cur síos: The procurement concerns vehicles for the home care service. Climate and environmental considerations are taken care of as absolute requirements in the requirement specifications, not as weighted award criteria. The requirement specification requires that the vehicles are battery electric with zero emissions, cf. the regulations on energy and environmental requirements when procuring vehicles for road transport. In addition there are requirements for heat pumps, preheating of coupes and batteries, a range of minimum 450 km after WLTP and normal charge intake of minimum 11 kW. The requirements ensure that the vehicles can actually be operated electrically throughout the year under the climatic conditions in Kåfjord and that they are charged on ordinary network withdrawal at the base. All tenders will therefore be zero emission vehicles. A weighting of climate and environmental considerations as the award criterion would therefore not have given real environmental effect, as the criterion would not sign between the tenders. The requirements in the requirement specifications are assessed to give a significantly better climate and environmental effect than weighting.
