Apraksts: The contracting authority will choose tenders on the basis of the lowest price.

Kategorija piešķiršanas kritērija svārs: Svērums (precīza procentuālā attiecība)

Piešķiršanas kritērija skaitlis: 100

Kritērijs:

Veids: Kvalitāte

Nosaukums: Reasons for the use of climate and environmental requirements in the requirement specifications.

Apraksts: The procurement is for cleaning tunnels with focus on top assignments in connection with. Tunnel washing and cleaning. The most comprehensive work assignment in the contract is the actual cleaning (Cleaning whole, half, technical and roadway) of the tunnels. The procurement also includes sample taking work notification, transport and delivery of waste to a certified site. According to the Public Procurement Regulations § 5b, the contracting authority shall take climate and environment considerations into all procurements in order to reduce the procurement's total climate footprint and environmental impact. The climate and environmental impact of this procurement is mainly connected to general requirements. tuned to vehicles and machines. The climate and environmental impact of this procurement is mainly related to: • Transport of personnel • Roadworks warning system (guiding vehicle) • Heavy diesel driven vehicles and machines • Waste management services • Discharge of washing water. • Use of soap • Particulate matter From the contracting authority's assessment, the minimum requirements set in the contract terms will give a better climate effect by ensuring that the winning tenderer fulfils the climate and environmental requirements that are set, which is something that is not certain by weighting equivalently with award criteria. The Norwegian Public Roads Administration has, in connection with the preparation of this contract, carried out a market survey. The study shows that there is limited access to emission-free machines and vehicles that can be used for washing/cleaning tunnels. That's why only requirements for emission free light vehicles and goods vans. The distances between the tunnels also make it very difficult to transport any electric machines such as sweeping and flushing vehicles. There is also a need for enough power from flushing vehicles for washing the tunnel. To achieve such power, we rely on diesel powered machines. Transport of personnel and goods The requirements for all light vehicles, including vehicles used in the contract, shall be 100% emission free. Light vehicles means passenger cars (M1/M1G), light goods van (N1/N1G). Emission free means vehicles that have progress based on all-electric or hydrogen. The above requirements do not apply to the use of vehicles for transport to, from and between work places that not be paid separately. The point is taken care of in chapter C3 point 5.6. Requirements regarding vehicles and machines. Setting minimum requirements provide a better climate effect by ensuring that the winning tenderer fulfils the climate and environmental requirements, which is something that is not certain by weighting equivalently with award criteria. Heavier diesel driven vehicles and machines Vehicle and machinery requirements are required for all petrol or diesel powered vehicles/machines used in the contract is expected to be approved in accordance with EURO 6/VI, any STEP 4/IV, or better. See C3 point 5.6 for further information. Absorption agents are required in C2 point 30.9. By setting minimum requirements in the contract, we are largely ensured a climate and environmental effect and we therefore considers the climate and environmental gains in this procurement better safeguarded through such a requirement position rather than the use of climate and environment as the award criterium. Soap for washing tunnels. It is necessary to use soap for

washing to get a good result. Soap is required that shall be used shall be easily biologically biodegradable in accordance with OECD test 301. There will be samples of washing water and sludge will be taken, and D1 37.3 requires that the builder can. require changes or stoppages in the use of chemicals that do not fulfil the requirements. Use of soap is also something one will follow up under controls. Assessments will be made for each tunnel regarding soap and if necessary for each wash. This is also stated in the environmental outline and the YM plan. Sampling and analysing sludge and washing water. There are separate processes in D1 point 37.35 for sample taking, analysing and apportioning sludge, sewage. and washing water. Analytical results shall be used as a basis for assessing handling, transport, delivery, depositing, adjusting cleaning frequency or implementing other measures, such as e.g. Use of soap or cleansing solutions for the individual tunnel. Waste Management Contractors are required to handle washing water, sludge, waste and polluted matter in accordance with the contract, the current rules, any emission permits and orders from the builder. Contractor shall plan the work work so that the washing water, sludge, sand and other waste does not create a risk of contamination, undesired run-off, littering damage to the environment. Cf. C3 point 5.8. Waste is required to be delivered to a certified waste disposal site. It is described in C3 and D1 that documented disposal fees for waste shall not be included in the unit price for
