Kritērijs:

Veids: Kvalitāte

Apraksts: The contracting authority has assessed which organisation climate and environment considerations ought to have in this procurement, including whether consideration should be taken care of as the award criterion or through requirements in the requirement specification /contract. The procurement concerns laboratory services where sample taking, analysis methods, requirements for sample handling and requirements on time before the analyses are initiated are largely regulated by the regulations, standards and professional requirements of accredited laboratories. This limits the scope of action to differentiate tenders for climate and environmental solutions without simultaneously risking the requirement for sample quality, analysis quality, transport time and proper execution being affected. The contracting authority has, thus, chosen to use the exemption rule in the supply regulations § 7-9, so that climate and environmental considerations are instead safeguarded through concrete and binding contract requirements. It is considered more suitable and proportionate in this procurement than using climate and environment as the award criteria. The requirement specification therefore requires that a minimum of 30 % fossil free means of transport shall be used for transport from the delivery place to the laboratory. The requirement applies during the entire contract period, and regardless of whether the transport is carried out with the laboratory's own courier cars or by an external transport company. See the contract documentation point C. 7.
