Apraksts: The competition is being held in accordance with the requirement for climate and environmental considerations in the supply regulations § 7-9. As stated in the utilities regulation § 7-9 Climate and environmental considerations in public procurements, the requirements and criteria shall aim at reducing the procurement's total climate footprint or environmental impact. The procurement mainly consists of the establishment of new wastewater pipelines and the establishment of wastewater manholes. Based on the requirements set in the contract and that will be enforced in the implementation of the contract, the contracting authority assumes that the requirement specification includes climate and environmental requirements that "provide better climate and environmental effect" than having climate and the environment as the award criterion. An assessment has been carried out of which factors most affect climate and environmental considerations in this contract. For this contract it is estimated that reuse of existing pipelines and manholes, mass handling and, in particular, reuse of matter, will reduce emissions. We refer to the following for the project Hystadvegen Water and Sewage installations: 1. Requirement for re-use of existing pipelines. 2. Requirements related to mass handling. a. Re-use of matter b. Local use of surplus matter c. Revegetation d. Correct handling of masses of top-soil 3. Newer machines and lorries (Euro 6/V) with low climate gas emissions shall be used in order to ensure climate-friendly site execution and transport. The requirement is defined in Part II the contract documentation, chapter C Technical requirements.
