II.2.4. Deskrizzjoni tal-akkwist

The scope of services consists in 3 main activities — water depth (mean/min/max): 99 m/96 m /102 m/Distance between 2 Floating offshore wind turbines ~(900 m; 1 000 m)

— Package 1 Clearance certification shall cover approx. a 50 m wide corridor along the Export Cable (Export Cable Route offshore part is about 19 km long) and consists in:

- verification of a target and deviation route to be surveyed in case of M_030 Anomaly classified as suspicious in KP 14 Box via SSS/MAG. Clearance verification on MAG anomaly shall cover a minimum of 20 m radius around the position and the target detected by SSS and MAG assets;

- validation of the export cable route (19 km, surveyed in 2017), via SSS (MAG data being already available). Clearance certification shall cover a 50 m wide corridor along the Export Cable Route by SSS only.

— Package 2 consists in a validation of the position selected as contingency layout for nine (9) suction piles (Chirp 3D and SSS only, MAG data being already available):

- clearance verification shall cover a minimum of 20 m radius around the 9 suction piles positions planned by to clear the field and Chirp 3D to verify 'deep' layer;
- the expected performances with Chirp 3 D must allow a good overview of the treated layer at not less than 5/6 meters deep and show (or not) the absence of potential obstruction impacting the installation of the 3 FOWT.

— Package 3 consists in an initial IAC layout survey via SSS/MAG.

- clearance verification shall cover a 40 m wide corridor along the IAC original route planned by SSS and MAG assets;
- Clearance certification shall cover also a 40 m wide corridor along the different IAC deviation route option in case of FOWT moving positions.

Each package will be divided into four main steps:

- mobilization phase: with a KoM and tests of the equipment (calibration phase onshore and offshore),
- operation at sea: with daily reporting and coordination with Client's Rep o/b Survey vessel,
- demobilization phase: with a hot wash up debrief onshore,
- data process and interpretation onshore/reports delivery: with data acquisition with 200 % overlapping/classification of obstruction (classification sheet), proofreading with PGL and target list creation offshore with specific overview on high level targets of interest in terms of UXO risk and position impacting the next steps of the project/Issue of UXO clearance certificates and Deliverables (Reports).
