2.1. Postup

Názov: OAS - Education administrative system Lillehammer Øyer and Gausdal

Opis: Lillehammer, Øyer and Gausdal municipalities are carrying out a joint procurement of education administrative systems for the municipalities' services in nurseries, primary and lower secondary schools with before-and-after-school care, educational-psychological services (PPT) and adult education. The procurement will be carried out in cooperation with the municipalities' joint ICT supplier IKOMM AS, who can assist with mercantile execution and project management. The education area in the three municipalities combined constitutes a comprehensive and socially critical service area with considerable complexity and large requirements for efficient interaction, information security and long-term development of the systems. The municipalities have a total of approx. 41,000 inhabitants and an education area consisting of municipal and private nurseries, primary and secondary schools, before-and-after-school care, PPT services and adult education. The procurement will be carried out as a negotiated procedure in accordance with part III of the regulations (EEA notice) and based on SSA-L with the accompanying annexes. The municipalities have chosen a modular procurement strategy to facilitate the best possible combination of functionality, quality, user friendliness and further development within the different disciplines. The procurement is therefore divided into the following sub-contracts: * Sub-contract 1 - Nursery administration * Sub-contract 2 - Primary and secondary schools and before-and-after-school care * Sub-contract 3 – PPT * Sub-contract 4 - Adult education Tenderers can submit tenders for one, several or all sub-contracts. Each sub-contract will be evaluated, assessed and awarded individually. The contracting authority reserves the right to enter into a contract with one or several tenderers. At the same time, the municipalities would like to ensure uniform and future orientated system architecture across the sub-contracts. Integrations, interface and interaction between the systems will therefore be a central theme in the competition. Tenderers shall describe how the systems support interaction between the sub-contracts, as well as integration with other municipal system portfolios and relevant national joint components. Separate requirement documents (Annex 1) have been prepared for each of the 4 sub-contracts in addition to the common requirement areas. The requirements will describe the functional, technical and integration needs within each discipline. The municipalities attach

great importance to information security, privacy and the suppliers' ability to long-term further development of the systems. The systems shall support the processing of sensitive personal data for children, pupils and users of the services, and at the same time facilitate efficient and user friendly work processes for employees, guardians and administration. The procurement shall contribute to modernising and further development of the municipalities' digital education services, with the aim of increasing quality, better interaction and more efficient administrative processes over time.

Opis: An assessment has been made of environmental requirements and environmental weighting in the procurement in accordance with the procurement regulations and the Public Procurement Regulations § 5. The procurement concerns a standardised software service /SaaS system where the environmental impact is mainly indirectly and to a limited degree affected by the actual competition or the evaluation of the tenders. Environmental requirements in this procurement are considered not to have sufficient real management effect or be suitable for separating the tenders in an objective and competitive relevant manner. The procurement is, therefore, instead aimed at conditions that are considered to be of greatest importance for goal achievement and social benefit, including functionality, security, integrations, service quality, lifecycle costs and sustainable operation through cloud based standard systems. Based on this, it is assessed as proportional and professionally justified not to use the environment as a separate award criteria in this competition.

Opis: An assessment has been made of environmental requirements and environmental weighting in the procurement in accordance with the procurement regulations and the Public Procurement Regulations § 5. The procurement concerns a standardised software service /SaaS system where the environmental impact is mainly indirectly and to a limited degree affected by the actual competition or the evaluation of the tenders. Environmental requirements in this procurement are considered not to have sufficient real management effect or be suitable for separating the tenders in an objective and competitive relevant manner. The procurement is, therefore, instead aimed at conditions that are considered to be of greatest importance for goal achievement and social benefit, including functionality, security, integrations, service quality, lifecycle costs and sustainable operation through cloud based standard systems. Based on this, it is assessed as proportional and professionally justified not to use the environment as a separate award criteria in this competition.
