II.2.4. Opis javnega naročila

City of York Council (CYC) and Harrogate Borough Council (HBC) have a joint ICT Management Service, and in part is a result of the strategic synergy between CYC and HBC's current and future ICT requirements. Additionally, CYC and HBC are very similar in terms of their demographic characteristics and both are considering their wider Smart City/Borough aspirations.

Key to achieving the Smart City objective is the quality, durability, ongoing viability and technically future proofed nature of the underlying connectivity infrastructure in CYC and HBC. This is especially important as it is the platform for the provision of other supporting technologies and services.

From a regional perspective, CYC and HBC are geographically close enough to achieve economies of scale when procuring the underlying infrastructure to drive their Smart City aspirations. Once the infrastructure is embedded, and a strategic plan engaged for delivery of services over the digital platform, it may also provide a spring-board for rolling out the infrastructure and services to other agencies and interested partners in the region.

CYC has already established itself as a 'Fibre City' and is providing some unified services (CCTV, UTMC, Education, Corporate, and Public Access) via the gigabit fiber infrastructure in the City. This has been possible because the City chose a joint approach to delivering connectivity for its corporate, education and UTMC networks via a single managed service delivery partner. CYC is currently "in Contract" with this managed service provider, for services that include but are not restricted to the design, management, and support of the corporate (and some partners) voice, data and wireless estate. This is supported and managed by an on-site team with a back up from their engineering and consultancy teams as required. The scope of the MSA includes the fiber backbone connectivity within the City. The MSA contract is due to expire 8th of September 2018.

HBC, on the other hand, have a number of disparate support and maintenance contracts and connectivity agreements in place with different providers and duration periods for its voice/data & CCTV connectivity layer and active network components.

This procurement is likely to use either the Competitive Dialogue or Competitive Procedure with Negotiation procedures.
